

NOVARIS

Quality Surge Protection

NEW RANGE OF ETHERNET & PoE SURGE PROTECTION

DRJ CAT6 SURGE PROTECTORS

DRJ45-1CAT6 | DRJ45-8CAT6

The Novaris DRJ CAT6 surge protectors are DIN rail mountable for equipment cabinets that do not contain 19 inch rack hardware.

The DRJ45-1CAT6 provides protection for one port, whilst the DRJ45-8CAT6 provides 8 port protection. The protective earth is provided by virtue of the connection to the DIN rail. An isolated earth version is available for the one port protection, being the DRJ45-1CAT6-EC90.

Both DRJ products have high energy primary stages along with secondary components providing both common and transverse mode protection. They are suited for gigabit Ethernet and PoE applications up to 160W.

2RU Rack Mount Protectors

RJ45-24CAT6

Novaris Multiport 2RU CCTV network protection products are suitable for 19 inch racks and available with 8, 16 or 24 ports. They can protect CAT6 Ethernet as well as PoE.

1 Port Network Protectors

RJ45-1CAT6

The RJ45-1CAT6 is designed for remote equipment protection, for example PC, CCTV or wifi access points. They can stand alone with an earth connection or clip to a DIN rail. They are also available with an isolated earth, RJ45-1CAT6-EC90.

RJ45-1CAT6-IP67

The RJ45-1CAT6-IP67 is IP67 rated and can be installed on cable with existing RJ45 connectors. Re-terminating is not necessary. It can replace the use of indoor-type products that would require an additional weatherproof housing. The isolated earth model is RJ45-1CAT6-IP67-EC90.
